Executive Summary

Overview

Periodic reviews of your group retirement plan can provide valuable insight into the current levels of its success. These snapshots give you the opportunity to evaluate your retirement plan benefit goals relative to real-time plan results, with the ultimate goal of providing you with information to help you make strategic adjustments as necessary.

For the purpose of this retirement plan review, only plan assets administered by MassMutual are included. The following pages detail plan- and participant-level activities over the stated period, review your current plan investment options, and recap any other services utilized by your plan. We strive to provide products with access to a wide variety of investment options. We are proud to provide award-winning service to your plan and its participants, and we look forward to helping you take advantage of the benefits of offering a group retirement plan.

Underlying Fund Scorecard

The following material has been prepared using public sources of information generally believed to be reliable. No representation can be made as to its accuracy. There are specific risks associated with certain funds. For additional details, please refer to the Investment Option Sheets under the Investments/Summaries tab of our Retirement Plans website at www.massmutual.com/planserve.

These investment options are available to your plan through a group variable contract offered to fund retirement programs. Your plan does not invest directly in the underlying fund.

The Morningstar Ratings shown apply to the underlying mutual fund.

Morningstar does not provide ratings for the investment options offered to your retirement program. The actual Morningstar rating of a corresponding investment option offered to your retirement program may be higher or lower depending on the fees and expenses associated with your program. These ratings are for illustrative purposes only and should not be relied upon for purchasing or selling units/shares.

The investment return and principal value of the funds will fluctuate so that shares, when redeemed, may be worth more or less than their original cost.

This information should not be construed as a recommendation to buy or sell any of the securities mentioned. References to securities are for illustrative purposes only.

Current performance may be higher or lower than the performance data quoted. For more current performance information to the most recent month end please visit www.massmutual.com/planserve or call 800-874-2502.

Performance shows returns based on a single investment in the fund at the beginning of the period being reported and retained throughout the period, and is stated after deduction for fund expenses. If the maximum sales charge was included, the return would be lower.

Total return includes capital appreciation, if any, plus reinvested dividends and capital gains. Funds may impose sales charges if they were to be purchased outside of a retirement plan. In that instance, the return would be less.

Important Definitions

Expense Ratio: The percentage of assets deducted each year for underlying fund operating expenses, management fees, and all other asset-based costs incurred by the fund, excluding brokerage fees.

R-Squared: Reflects the percentage of a fund's movements that can be explained by movements in its benchmark index. An R-squared of 100 indicates that all movements of a fund can be explained by movements in the index. Conversely, a low R-squared indicates that very few of the fund's movements can be explained by movements in its benchmark index.

Standard Deviation: A statistical measurement of dispersion about an average that depicts how widely the returns varied over a certain period of time. High standard deviation indicates the predicted range of performance is wide, implying greater volatility. If a fund's returns follow a normal distribution, then approximately 68 percent of the time they will fall within one standard deviation of the mean return for the fund, and 95 percent of the time within two standard deviations. Morningstar computes standard deviation using the trailing monthly total returns for the appropriate time period. All of the monthly standard deviations are then annualized.

Morningstar Rating (Morningstar Risk-Adjusted Rating): Often referred to as the Star Rating, the Morningstar Rating brings load-adjustments, performance (returns) and risk together into one evaluation. To determine a fund's star rating for a given time period (three, five, or 10 years), the fund's risk-adjusted return is plotted on a bell curve: If the fund scores in the top 10% of its category, it receives five stars (highest); if it falls in the next 22.5% it receives four stars (above average); a place in the middle 35% earns three stars (average); those lower still, in the next 22.5%, receive two stars (below average); and the bottom 10% get one star (lowest). The Overall Morningstar Rating is a weighted average of the available three-, five-, and 10-year ratings.

Fund-Specific Risks

Indexes are unmanaged and their returns do not include any sales charges or fees an investor would pay to purchase the securities they represent. Such cost would lower performance. It is not possible to invest directly in an index.

Certain funds listed on the following pages may invest in any of the following types of securities. Please read the risk associated with investing in each type of security.

- † **Mid-cap stocks** generally have higher risk characteristics than large company stocks.
- ‡ **Small company investing** involves specific risks not necessarily encountered in large company investing, such as increased volatility.
- ▲ Investing in **foreign issuers** and non-dollar securities may involve different and additional risks associated with foreign currencies, investment disclosure, accounting, securities regulation, commissions, taxes, political or social instability, war, or expropriation.
- ◆ **An investment in a money market fund is not insured or guaranteed by the Federal deposit Insurance Corporation or any other government agency. Although the fund seeks to preserve the value of your investment at \$1.00 per share, it is possible to lose money in the fund.**
- **Bond** securities rated “BBB” and below are commonly referred to as “high yield, high risk securities” or “junk bonds.” High yield bonds generally involve greater credit risk and may be more volatile than investment-grade bonds.
- ▼ **Specialty fund** investments are concentrated in a specific industry or sector, and are subject to greater risk than traditional diversified equity funds.
